Claude Code Cursor Vercel Supabase Mapbox
February 2026 – Present

40 years

of place-attachment research finds that time spent somewhere and local social ties are the strongest predictors of attachment.

Neighborhoods, routines, relationships, and memories accumulate into a perspective, **someone unmistakably shaped by where they're from**, and where they've been.

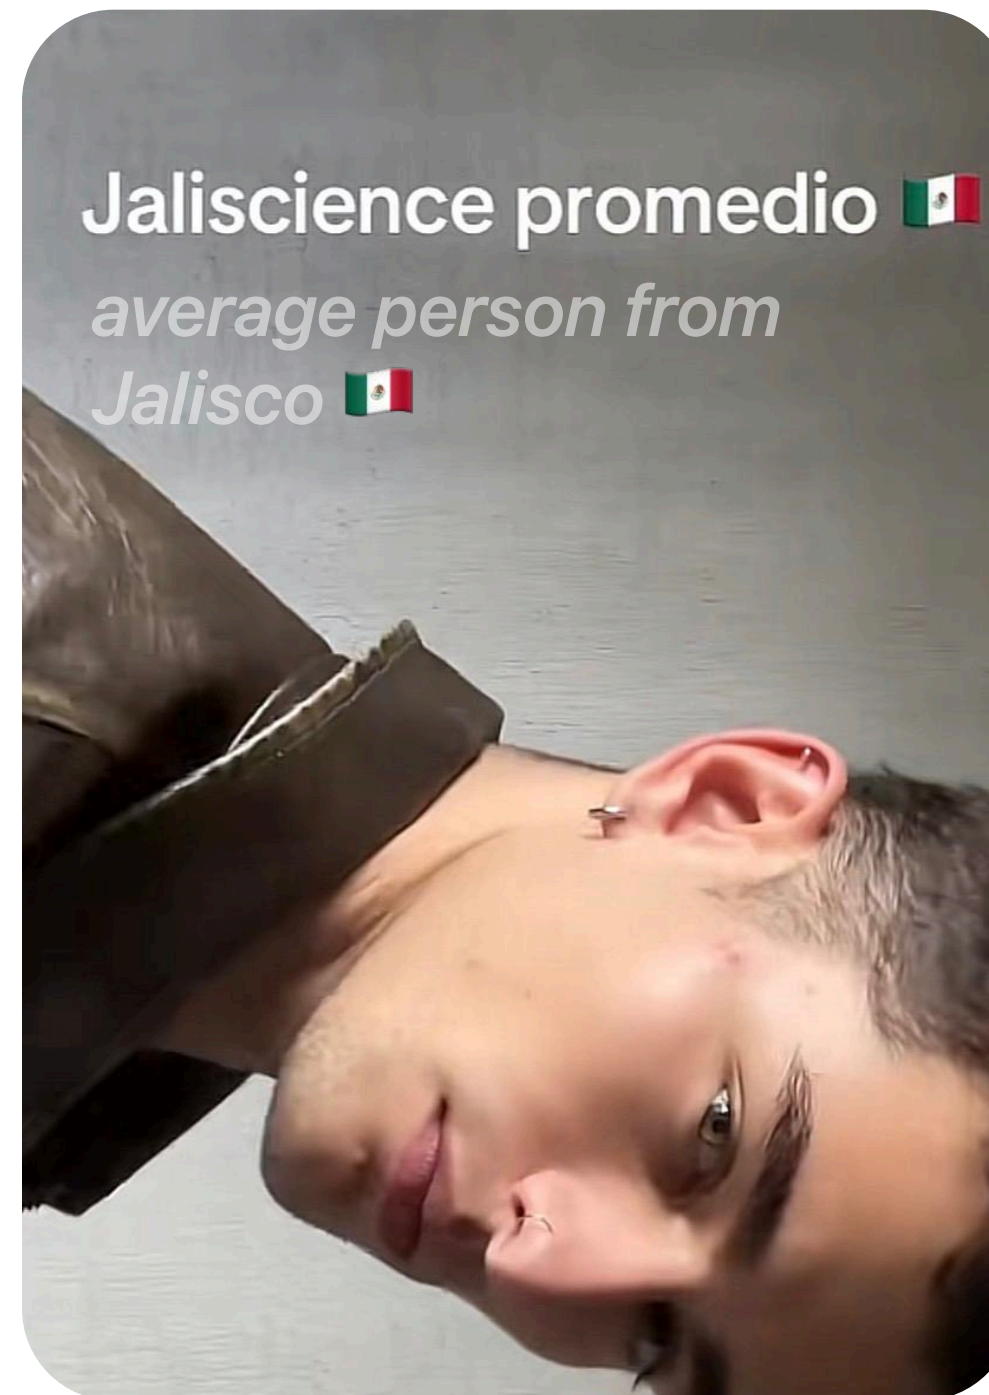

Gen Z speaks of **place** as identity.

montauk, new york

Social Code

jalisco, mexico

Archetype

cebu city, philippines

Lived Context

Our experiences of places are scattered
across different products.

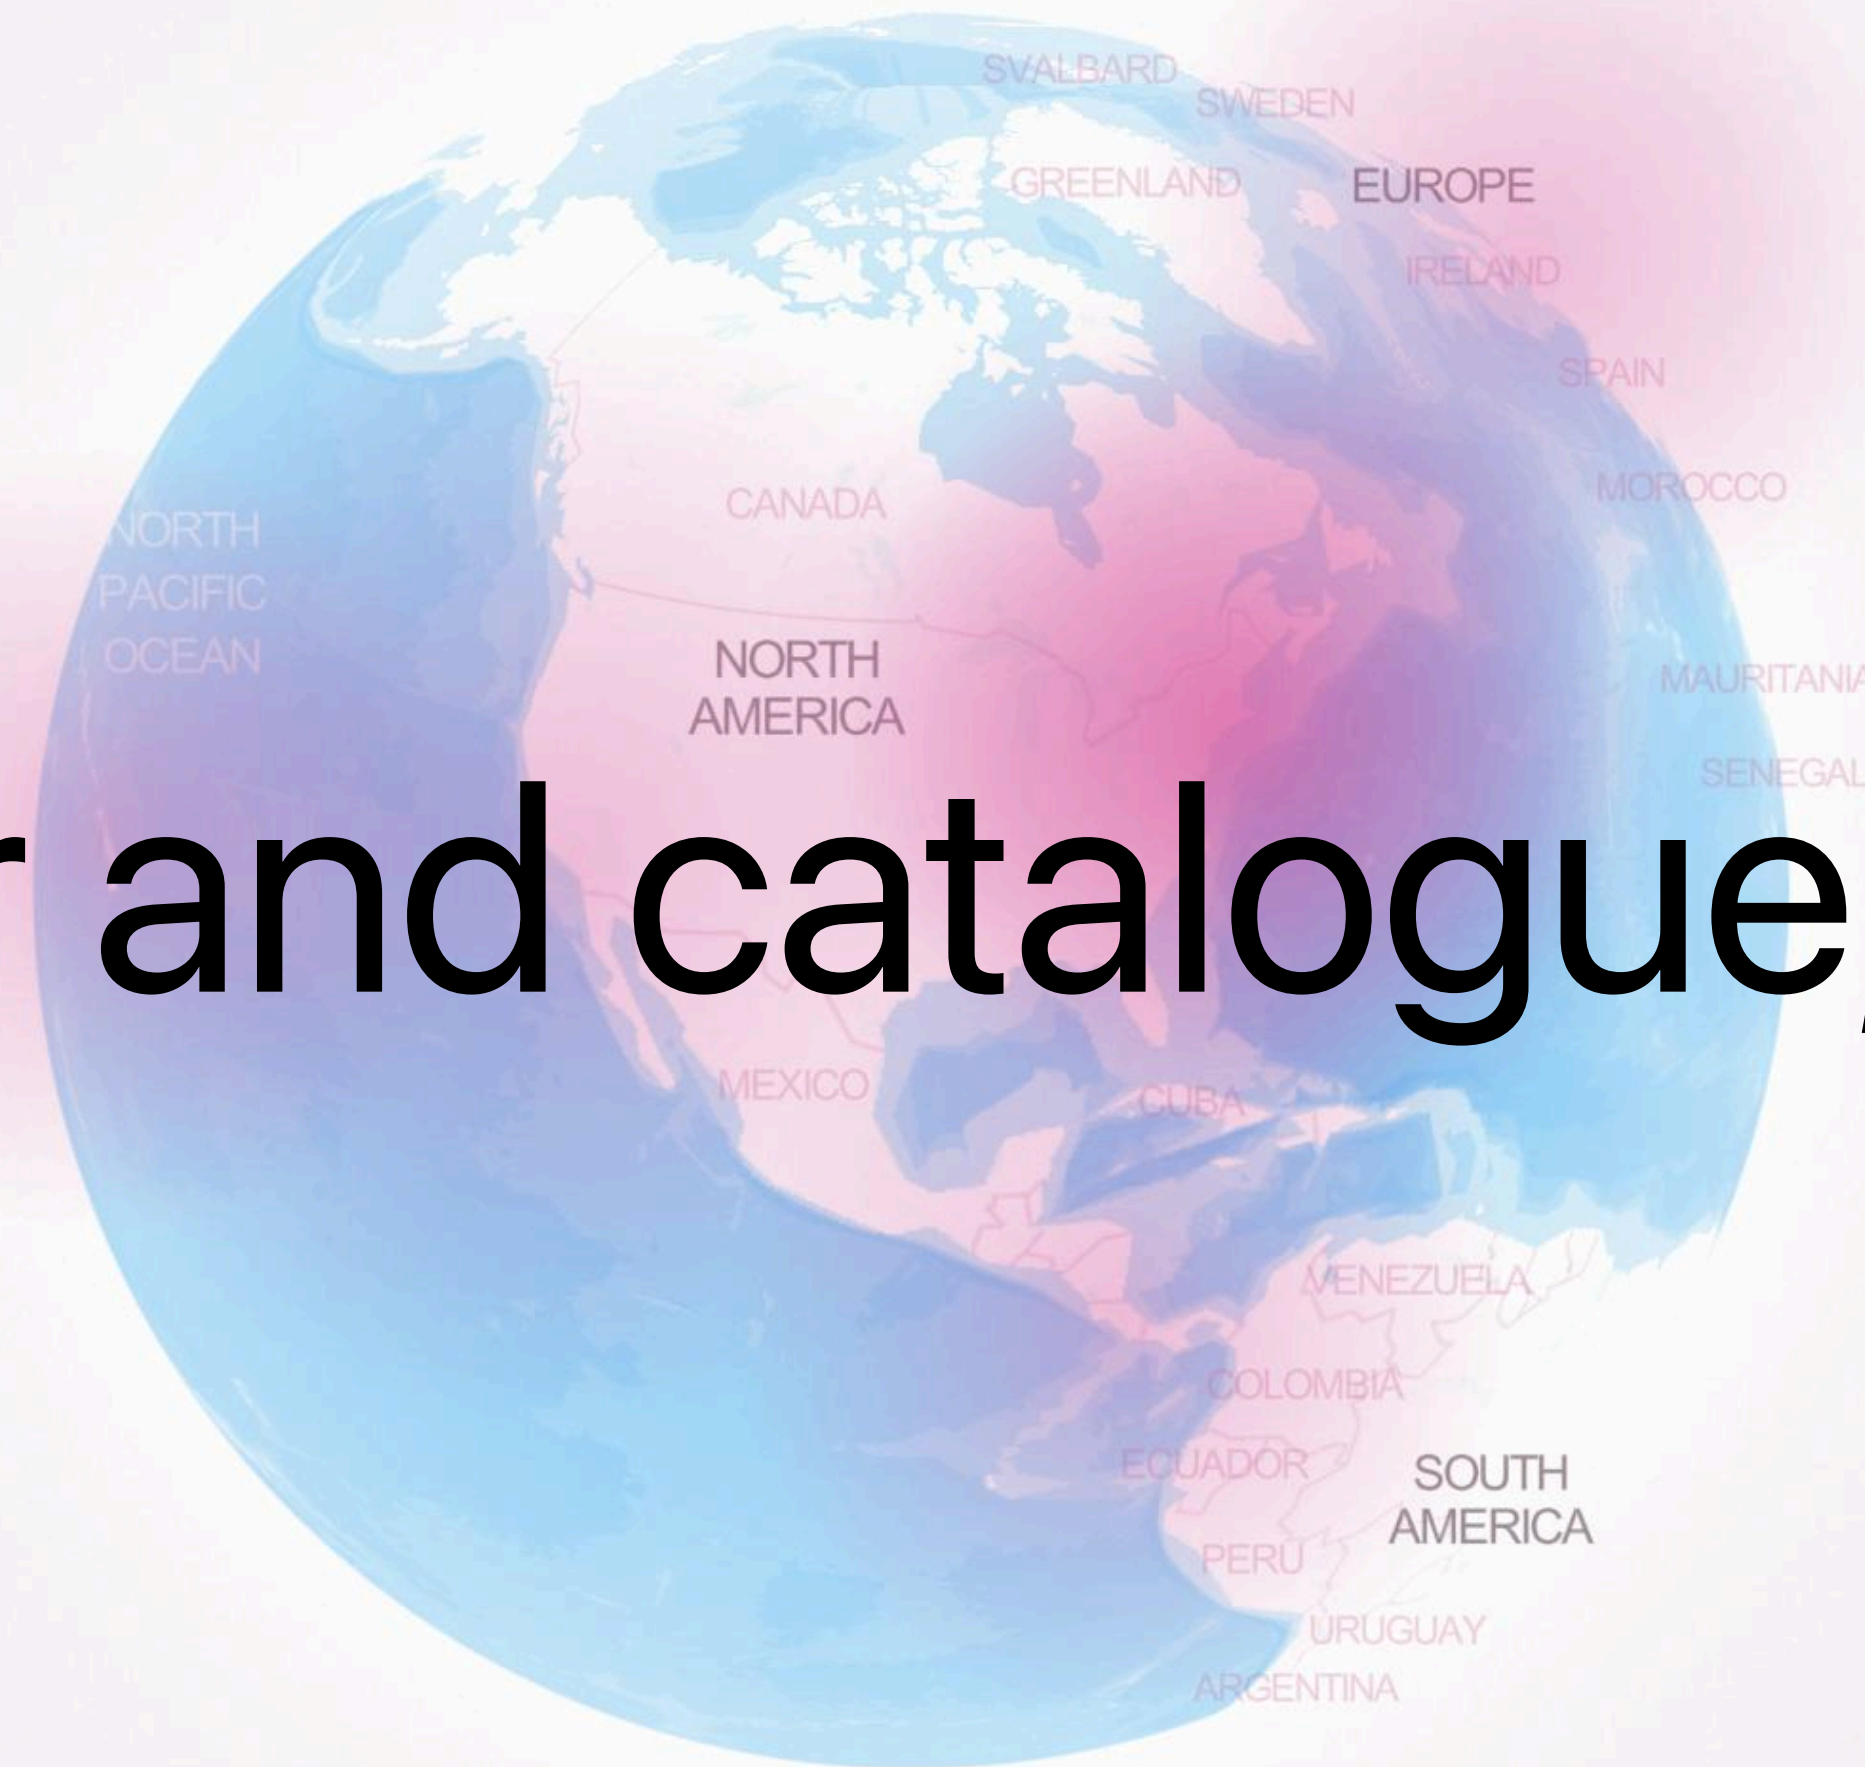

Separately, they become
difficult to retrieve or share.

Product	Holds	Misses
Social	The polished moment	The details around it
Camera Roll	Every photo and screenshot	Shared context
iMessage	The personal reaction	Retrievability
Maps	The coordinate, navigation, reviews	The lived experience

chicfilles anchors memory to place.

Users turn personal photos into geographic archives they can revisit and share with friends.

Discover and catalogue, globally

Life mapped by **cities**, starting at home.

i'm a  **chicfille** in

portland

portland, oregon

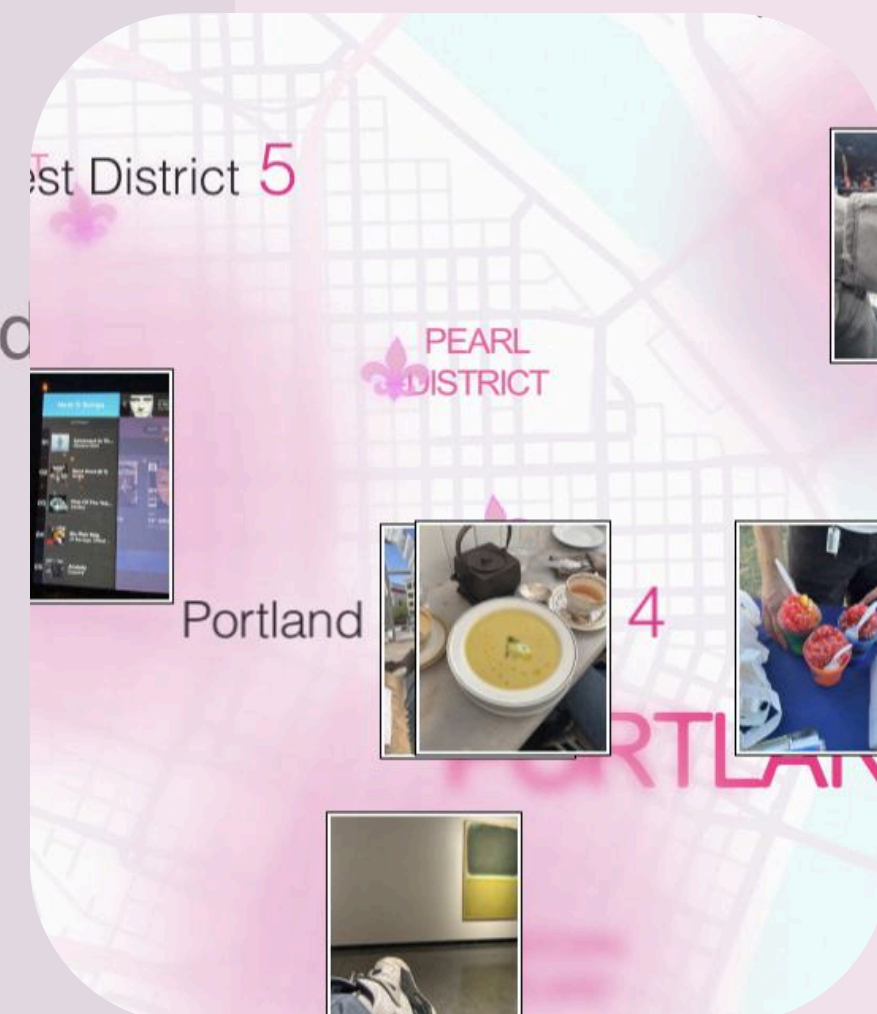

porta westfalica, kreis mindo

portland, maine

portalegre, portalegre

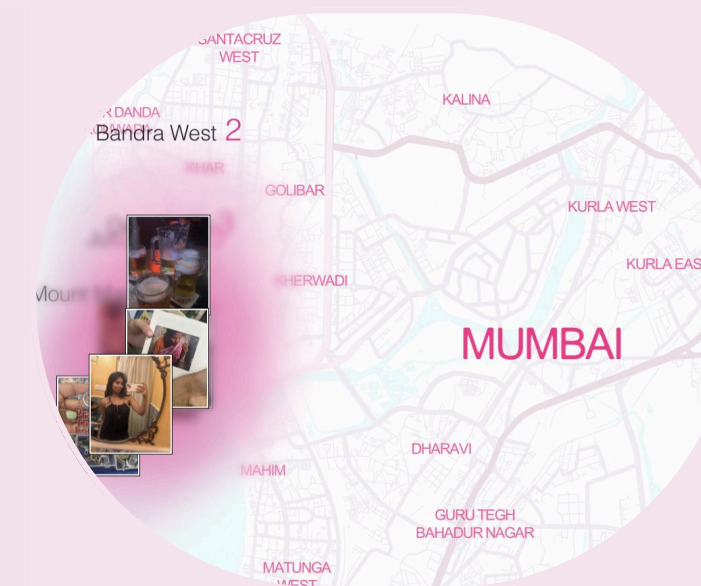

portland, dorset

portage, wisconsin

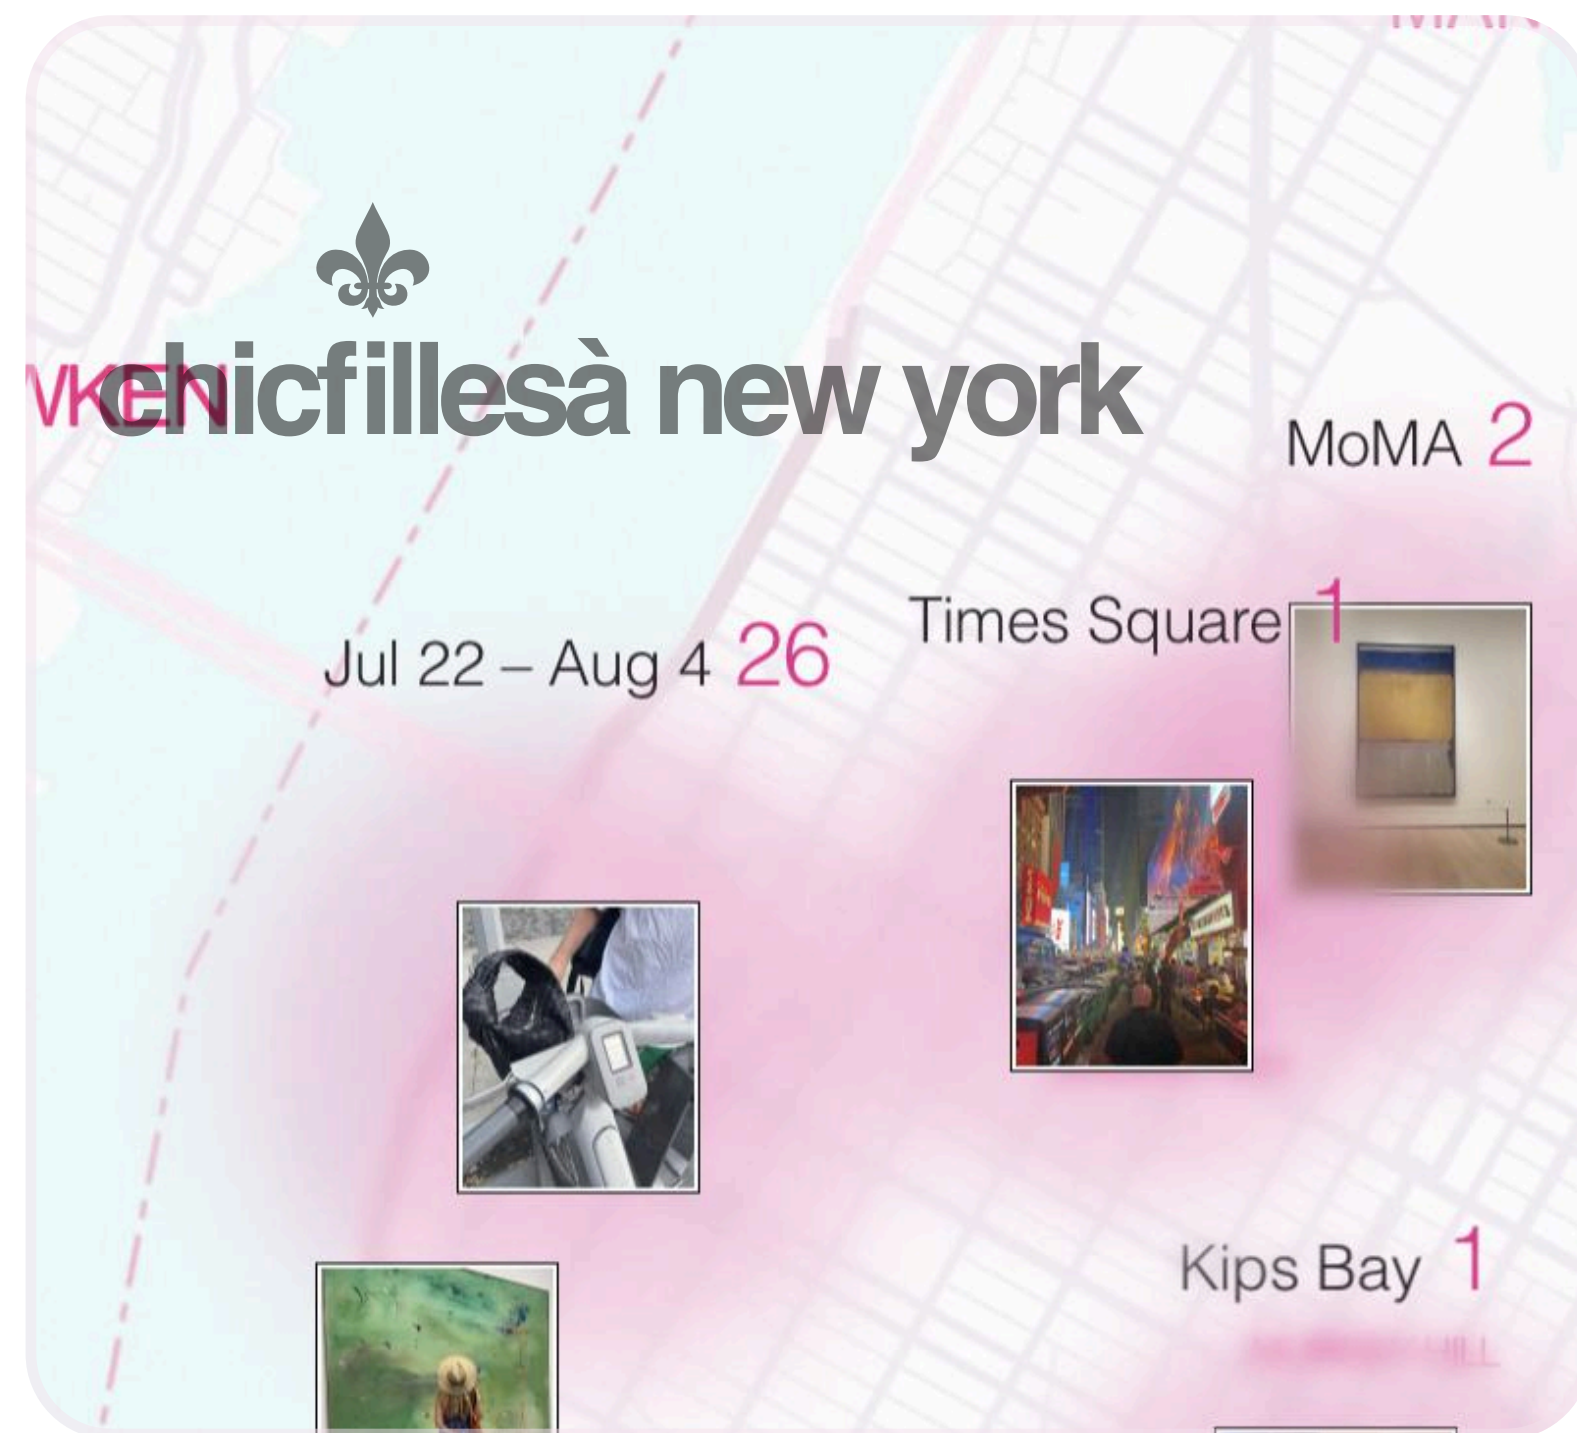

First, choose your home base,

...then leave your footprint on the world.

Your places and days are your life

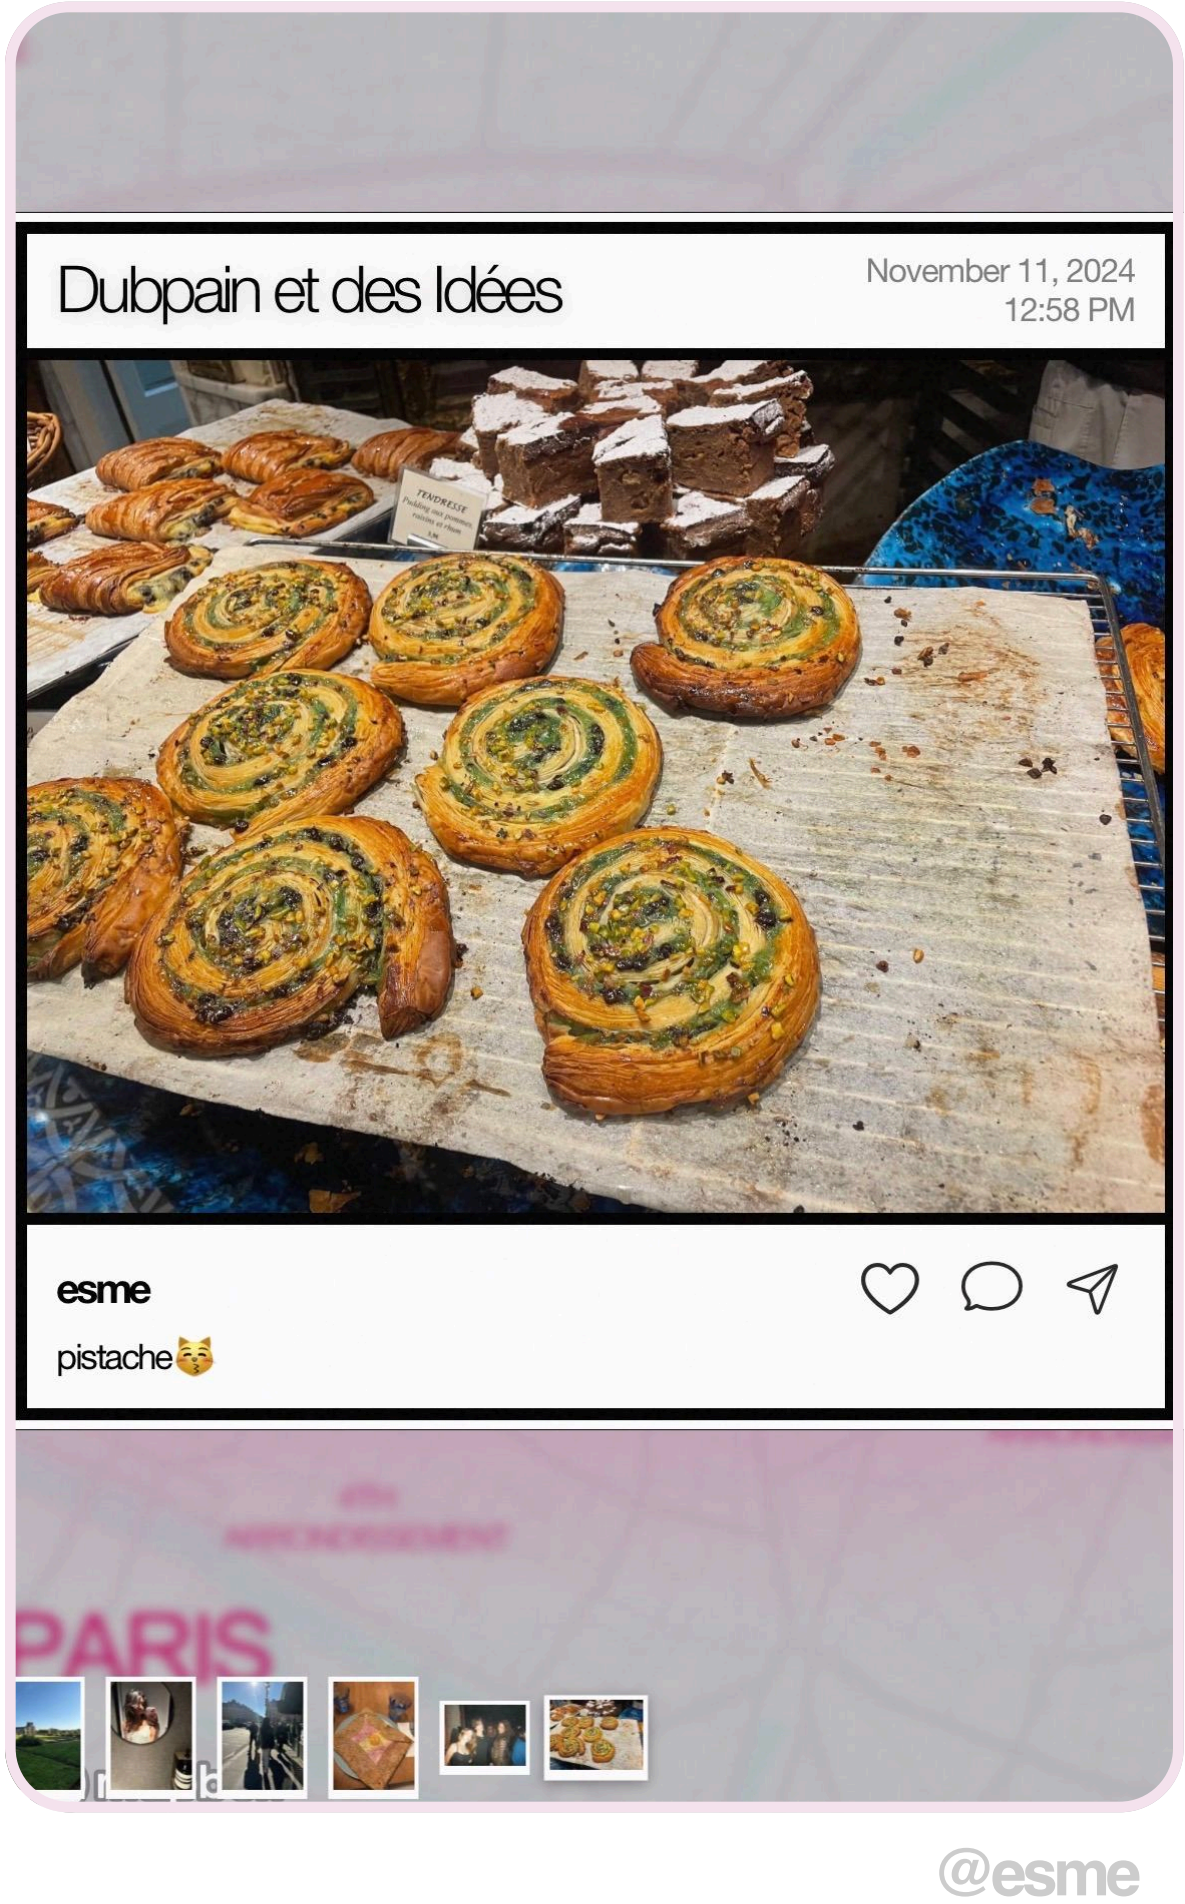

Significant dates and places are clustered

Could be:

- The places you return to
- A cluster of dates with more activity
- A one-off post important to you

Swipe or scrub through time like a camera roll

chicfillesà paris

Click the location to focus the roll to memories at that place

Every memory answers **3 questions**

HOW IT FELT

Polished photos, blurry screenshots, text posts and emojis are treated as equally valid records of experience

WHEN IT HAPPENED

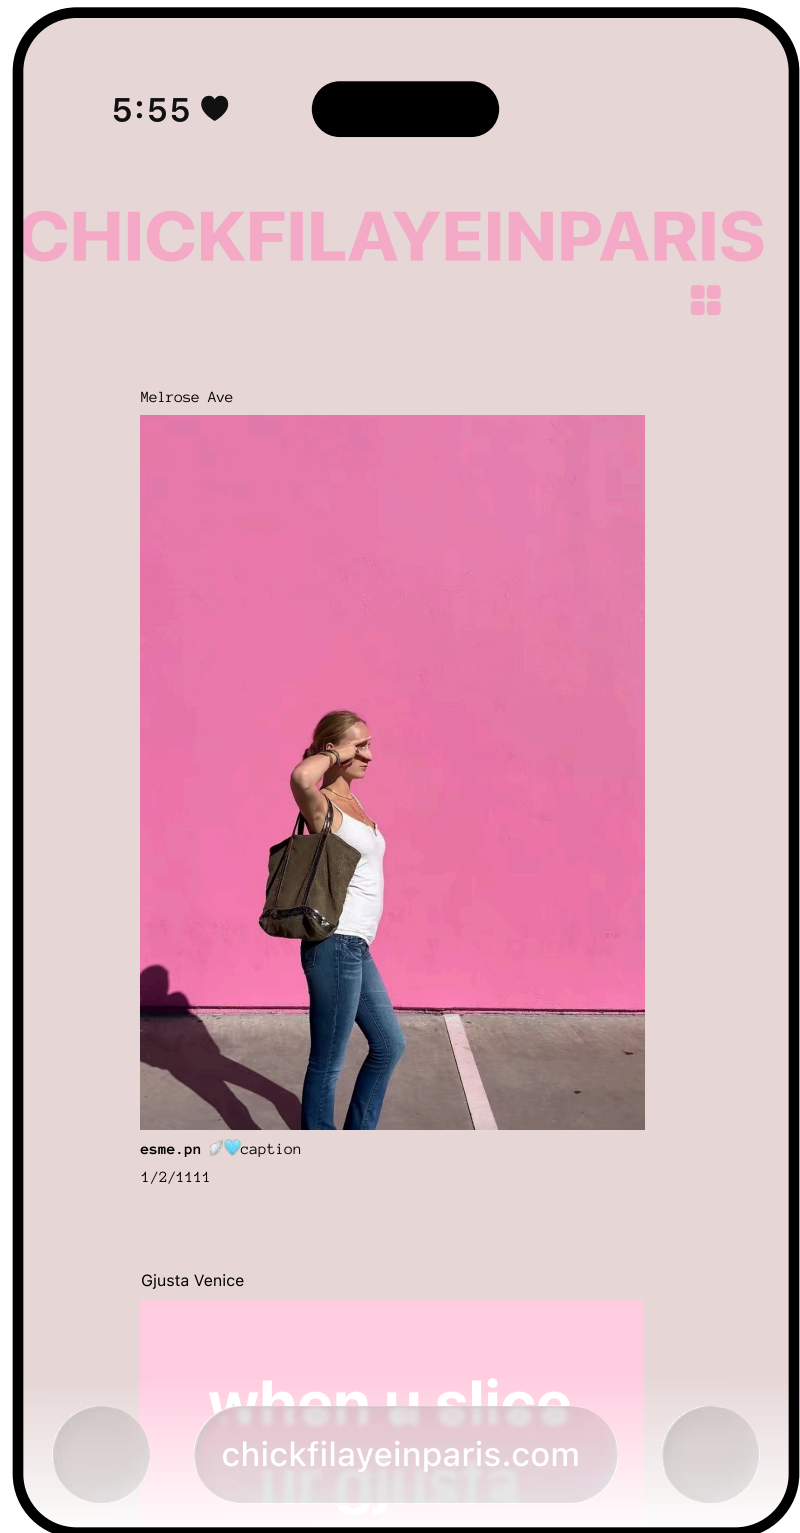

Photo metadata preserves the original date and time, allowing users to backfill years of memories without reconstructing every timeline.

WHERE IT HAPPENED

Every memory is anchored to a coordinate, making geography the archive's primary retrieval layer.

5 Versions in 5 months

V1: Feed Feb 2026

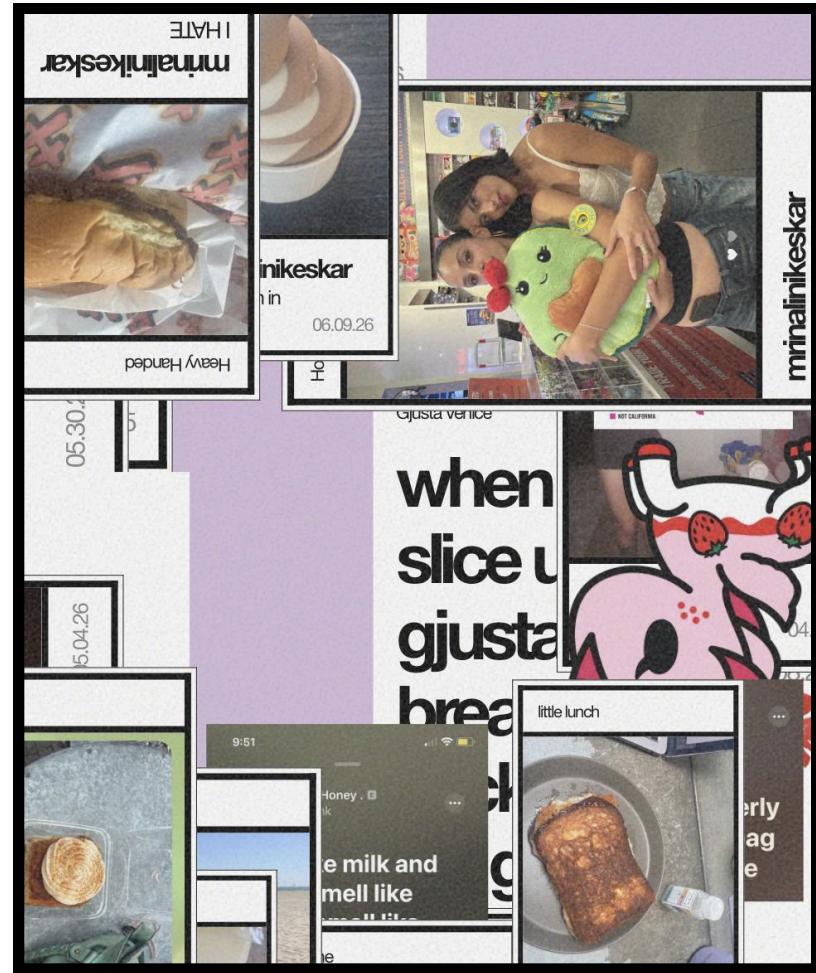

Shipped in one day

Scrollable feed, static location tags

Learning: Endless scroll not conducive to importance on certain places & accumulation of content

V2.5: Sticker Board

Polaroid styling Apr 2026

Cursor interactions for added texture and play on desktop

Learning: Mobile needs its own texture

V3: Static Map + Notes

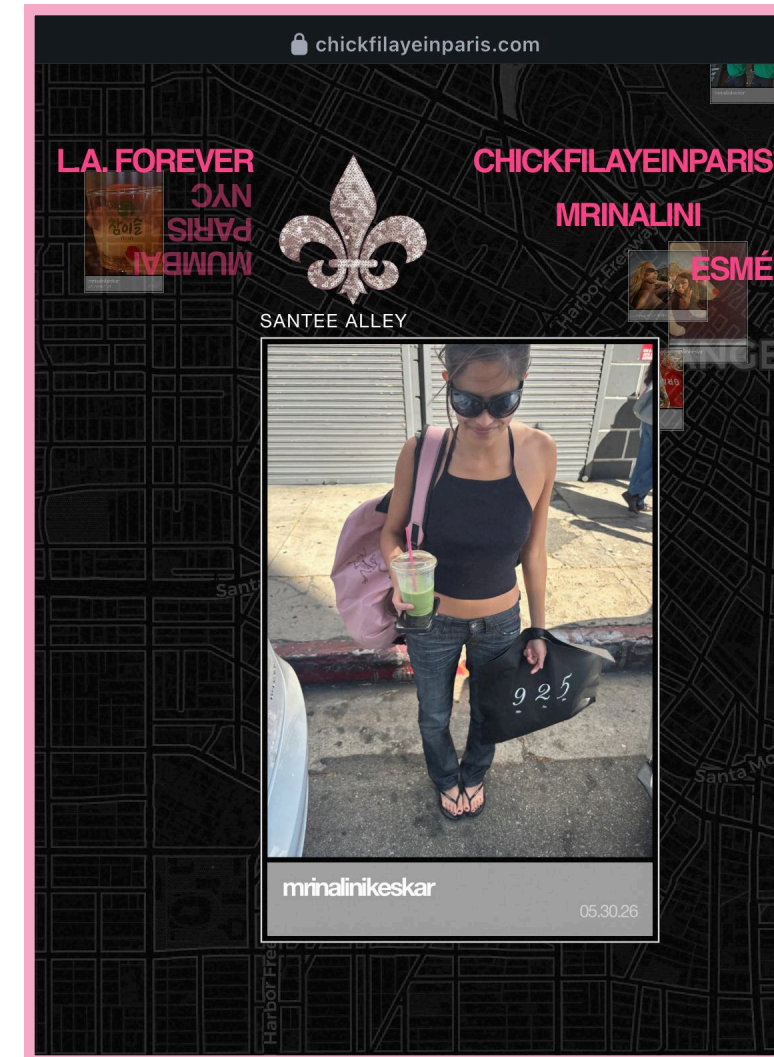

Leaflet integration

Mar 2026

Static map with pinned location linked back to posts

Learning: Location and geography is integral to the main product

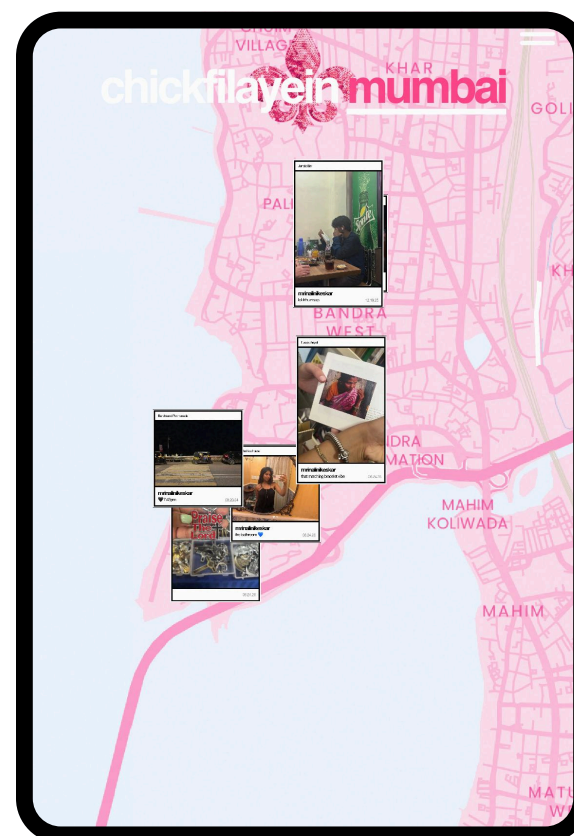

V4: Mobile Map Jun 2026

Map-first mobile experience
Snap-to-post navigation

Learning: Camera roll metaphor is stronger, linear swipe between posts limits discovery

V5: Multi-City Camera-Roll Map

Jul 2026

Added 3 cities

Polaroids appear pinned to coordinates, tapping a thumbnail opens a city's 'camera roll'

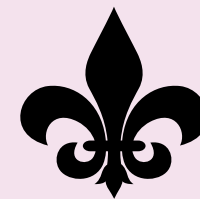

Added importance algorithm:

Thumbnails appear on the map prioritized by recency, repeat patterns, and dates with significant activity

Learning: the idea is scalable to more users and 'their' cities

V7 Snapshot
